TOOLBOX TALK for November 9th, 2026

Capenter's Training -
Portland - 11/7 Rough Terrain Forklift. 11/14 MEWP. 11/21 First Aid.
Ontario - 11/14 First Aid. 11/21 Rough Terrain Forklift
Tangent - 11/13 MEWP. 11/14 First Aid.

Incident Update:

With 171,040 man hours worked so far this year, we've had 5 recordables with 4 of those being eye incidents. All our recordable incidents happened between August 14th and October 27th a span of only 55 days. As of today, we have 44 workdays left in 2026.

As a response to our eye injuries, we created a Corrective Action Plan for our Astoria crew, but the corrections we made there can benefit all our crews.

Corrective Acton Plan (CAP)

For the Crew:

- Review previous incidents on your site and how they were reported.
- Review requirements for eye protection on the job - Spoggles are mandatory while framing, drilling or shooting overhead.
- How to avoid getting debris in the eye - Before removing eye protection tip head forward and sweep any debris from forehead and eyebrows.
- Tap off material before lifting it over our heads and installing it.
- Remind workers to keep their faces out of the line of fire when screwing studs or doing any work that could create flying particles
- All future employees will be trained in these same techniques

Foremen: All foremen update on first aid and urgent care

- Report incidents as soon as possible. Report to FSS and the GC.
- Know proper first aid techniques (Refresh First Aid Training if your cert is expired).
- Know where to take crew members for non-life threatening incidents. Be sure to go to the Urgent Care with the worker. (Call FSS safety for help)
- Urgent Care facilities in Oregon are listed on www.fsstools.com under the tab that says *Hearing and Drug Test locations*.
- Be prepared ahead of time for incidents and respond quickly and with certainty.

Taking a few precautions can keep us safer and more ready when something does happen.
